DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

2. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is rejected because it is unclear what is meant by "seals the gap by fusing a top portion thermoplasticity material". It is unclear what is meant by "seals the gap by fusing a bottom portion thermoplasticity material".

Claim 3 is rejected because it is unclear if the phrase "comprises lithium mix oxide including LiMO₂" means that LiMO₂ is in addition to a lithium mix oxide or is the lithium mix oxide. It is also unclear if the negative electrode comprises one of a non-graphitizing carbon material and one of a graphite material or the negative electrode only has to comprises one of either a non-graphitizing carbon material or a graphite material. This claim is indefinite because of the use of "comprises one of" and because of the use of "and".

Claim Rejections - 35 USC § 102

3. Claims 1-5 are rejected under 35 U.S.C. 102(a) as being anticipated by Kida et al. (JP 2000-156209, abstract).

Kida et al. teaches a battery comprising a positive electrode, a negative electrode and a nonaqueous electrolyte are housed between a pair of armors with inner surfaces formed with a resin, the resin on the periphery of the inner surface of each of the armors is mutually adhered to seal, and each of terminals 22, 32 of the positive and negative electrodes is extended outside through sealing. An outer surface of each of the terminals in contact with the resin on the inner surface of the armor at the sealing is composed of a conductive polymer 22a, 32a. Kida et al. teaches in column 3, [0015] that the positive electrode comprises LiCoO_2 , LiNiO_2 and LiMnO_2 . Kida et al. teaches in column 6, [0031], that the negative electrode comprises a carbon having a $d_{002} = 3.35\text{\AA}$ and a $L_c > 1000\text{\AA}$.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
